

Electric fencing 2023

A man wearing a cowboy hat and a plaid shirt is working on a fence made of wooden posts and horizontal rails. He is holding a tool, possibly a wrench, and is looking towards the left. The background shows a hazy landscape with hills and a red vehicle parked in the distance.

We design and develop
We manufacture
We assemble

All in the Czech Republic

fencee

**What is
fencee**

Czech brand introduced on the market in 2017. Due to many years of experience and supporting environment of our parent company VNT, which was founded by Jiří Novák in 2004, we have the best prerequisites to design and develop products that will be the state-of-the-art in electronic appliances and will compete alongside products with a long tradition.

During the years of the company existence, we have built development centre, our own prototypes and serial production at our operation centre in Lanškroun. The process always starts with the notion „let's create something brilliant“ and finishes with serial production – this all in one place.

To optimise the whole production process, we set up a subsidiary, Morelli electronics s.r.o., which is engaged in the design development and production of printed circuit boards. Due to that, we have control over the full production process of fencee energizers.

Design and development

Long-term collaboration and support with **VNT electronics s.r.o.**

Manufacturing

Production of PCBs for fencee products is carried out by **Morelli electronics s.r.o.**

Assembly

We manufacture and assemble all our products under one roof at our place in Lanškroun.

Proof of quality

20 years on the market
proven brand Dogtrace,
our first successful brand.

www.dogtrace.com

We have a clear vision

„Our ambition is to be a company that sets the trend in the development and production of not only electric fences but also other electronic devices.“

Jiří **Jiří Novák**
Director

Functions of the fence energizers

ALL MODELS

Czech product.

3 years warranty.

Complies with European Directive 2014/35/EU – 2014/30/EU.

On-wall installation is very easy.
Practical installation **DIN rail** is one of many accessories available.

fencee energizers are **resistant to all climatic conditions**. Rain, direct sunlight and frost.

Modern **LED diodes** with BrightLight technology offering high luminosity.

Easy use and comfortable switching thanks to the **ON/OFF button**.

Very **low and efficient** energy consumption.

Smart Control technology provides **microprocessor controlled** operation and optimum performance.

Special **ST transformer**, extra high voltage with long term protection.

The SafeShock technology ensures maximum safety for your animals – specially shaped impulse curve.

power DUO PD MODELS

Combined operation
Power supply is possible from a 230 V using an adapter or from a conventional 12 V battery, also usable as a backup supply.

LED Bargraph
Visually gives information about the state of the fence.

Time delay 50 s
Increase power to maximum power for safety reasons. Only **power DUO PD70**

Power switching
Manual switching between high and low power. Optional for the user to save battery when needed.

Battery management
Checking and managing the battery status.

Power Save Technology
When power is increased to maximum. Due to safety reasons. Only **mini DUO MD**

energy DUO ED MODELS

Extreme power
Energizers with power up to 15 J.

Power switching
Manual switching between high and low power. Optional for the user to save battery when needed.

Setting buttons
Simple and easy to use.

Combined operation
Power supply is possible from a 230 V using an adapter or from a conventional 12 V battery, also usable as a backup supply.

Yellow terminal
For reduced output.

Time delay 50 s
Increase power to maximum power for safety reasons.

LCD Display
Large graphic display with all information about the fence.

LED Bargraph
Visually gives information about the state of the fence.

Battery management
Checking and managing the battery status.

MODEL **power energy PE60**

Special transformer
designed for high loads.

Extra high voltage 12 500 V
10 000 V at 500 ohm load.

Developed to protect
against predators.

power DUORF PDX MODELS

Basic range of the transmitter **up to 10 km.**

Current information about the fence.

Alarm signalling
The device signals alarms that audibly alerts you.

Combined operation
Power supply is possible from a 230 V
using an adapter or from a conventional
12 V battery, also usable as a backup supply.

Phone control
You can control PDX energizers from a mobile
phone or PC with the fencee Cloud application.

fencee Cloud
Possibility to connect to the Cloud.

LED Bargraph
Visually gives information about the state of the fence.

Power switching
Manual switching between high and low power.
Optional for the user to save battery when needed.

Time delay 50 s
Increase power to maximum power for safety reasons.
Only **power DUORF PDX70**

Battery management
Checking and managing the battery status.

No SIM CARD needed
No additional operation costs.

External antenna
With external antenna range up to 30 km.

energy DUORF EDX MODELS

Extreme power
Energizers with power up to 15 J.

Phone control
You can control EDX energizers from a mobile
phone or PC with the fencee Cloud application.

fencee Cloud
Possibility to connect to the Cloud.

Combined operation
Power supply is possible from a 230 V
using an adapter or from a conventional
12 V battery, also usable as a backup supply.

Power switching
Manual switching between high and low power.
Optional for the user to save battery when needed.

Setting buttons
Simple and easy to use.

LCD Display
Large graphic display with all information about
the fence.

Yellow terminal
For reduced output.

Time delay 50 s
Increase power to maximum power for safety reasons.

Earthing measurement
Green terminal for measuring the earthing quality.

Basic range of the transmitter **up to 10 km.**

LED Bargraph
Visually gives information about the state of the fence.

Battery management
Checking and managing the battery status.

No SIM CARD needed
No additional operation costs.

External antenna
With external antenna range up to 30 km.

MODELS **energy Smart DUO EDW**

Wi-Fi technology

Energizers with direct connection to the Cloud without the need of a central Gateway.

Phone control

You can control EDW energizers from your mobile phone or PC with the fencee Cloud app.

External Wi-Fi antenna

With an external antenna you increase the control range between the mobile phone and the energizer.

FENCE **WiFi GATEWAY GW100**

fencee Cloud

Possibility to connect to the Cloud.

No SIM CARD needed

No additional costs for operation.

Phone control

Control and monitor all devices with the mobile app.

Control up to 12 devices.

Alarm signalling

The device signals alarms that audibly alerts you.

External antenna

With external antenna range up to 30 km.

Current information about the fence.

Backup power

Wi-Fi technology

For connection to the Cloud.

Monitor **MX10**

fencee Cloud

Possibility to connect to the Cloud.

Measurement of fence parameters.

Modern **LED diodes** with BrightLight technology offering high luminosity.

No SIM CARD needed

No additional operation costs.

Simple operation using magnet.

IP44 protection.

fencee Cloud

Online information

Current online information about all devices.

Phone control

Control and monitor all devices with the mobile app.

Alarm signalling

Notification of the problem immediately on your phone and email.

No SIM CARD needed

No additional operation costs.

Without limits

The application has no limit for number of devices.

Time saving

No more running around the fence. You control everything from a phone or PC.

Control from anywhere

You can control the device literally from anywhere.

SW update

Automatic update via the Internet.

Map base

Real location of individual devices. Easy orientation.

Why fencee

Thanks to incorporating the latest technologies, we can offer you a large portfolio of functions in the fencee energizers. Apart from the standard benefits, such as high resistance of the product, we can also offer special functions for increased protection of animals and the environment. Large terminals for connecting wires and earthing are available on the front panel of energizers for convenient installation. They allow you to connect the fencing wires quickly and securely.

Novelty in our range of products is complete system of Smart Farm solution with the possibility of control via a mobile application or web interface from anywhere in the world. We are creating the future and taking fence control to a new level.

Our fences and some related products are produced exclusively in the Czech Republic. We are proud, that we are able to control the quality of the entire production process. We select qualified suppliers of all necessary components.

fencee energizers are subjected to strict tests in the climate chamber, they are tested in conditions such as those encountered during normal use. Thanks to the reliability and quality of our energizers, we can offer an extended warranty of 3 years.

In case of failure or damage to the energizer (e.g. lightning strike, water damage, etc.) our technical service department is available since the moment of notification.

Smart Farm fencee Cloud System is protected in the EU utility model.

We collect awards

SMART FARMING

Using modern technology to improve the quality of agricultural produce.
power DUORF PDX

Zlatý klas 2018

Received an award for innovative contribution to modern agriculture.
power DUOPD

Received an award for innovative contribution to modern agriculture. **Modern smart farm fencee with FENCE WiFi GATEWAY GW100**

AnimalTech 2023

Award of magazine *Náš chov*.
Virtual fencing GPS F10

mini M

Small mains energizers with power up to 1 J to provide an economical solution for your fencing gardens and property. Easy installation and operation with minimum maintenance and costs.

mini DUO MD

Energizers with small dimensions, power up to 1 J and combined power supply for use anywhere. Suitable for paddocks, shorter and temporary enclosures. With battery power saving function.

power P

Popular mains energizers with an output of 1–5 J. Universally suitable for most animal species. Reliable and maintenance-free solution thanks to power supply from the mains.

power energy PE60

Extremely powerful mains energizer with specially designed transformer for very high loads. Provides sufficient voltage even in dense vegetation.

power DUO PD

Combined energizers 1–7 J for use in places without electricity. LED indicator and BARGRAF show the operation of the power supply, measure the voltage and indicate any faults.

power DUO RF PDX[®]

Smart Combined Energizers with 1–7 J and possibility of remote operating via a small remote control or mobile phone. Up-to-date information about the situation of the electric fence on your mobile phone with fencee Cloud app or in the remote control.

energy DUO ED

Combined energizers with high power up to 15 J. Ideal for permanent electrical fences with installation lengths up to 120 km.

energy DUO RF EDX

Smart powerful energizers up to 15 J with combined power supply. The energizers can be controlled remotely from anywhere in the world by mobile phone via fencee Cloud app.

energy Smart DUO EDW

Smart Combined Wi-Fi energizers with power outputs of 10 and 15 J. Direct connection to the home Wi-Fi network. Unlimited control with your mobile phone without the need for a central Gateway.

Recommended height of fences

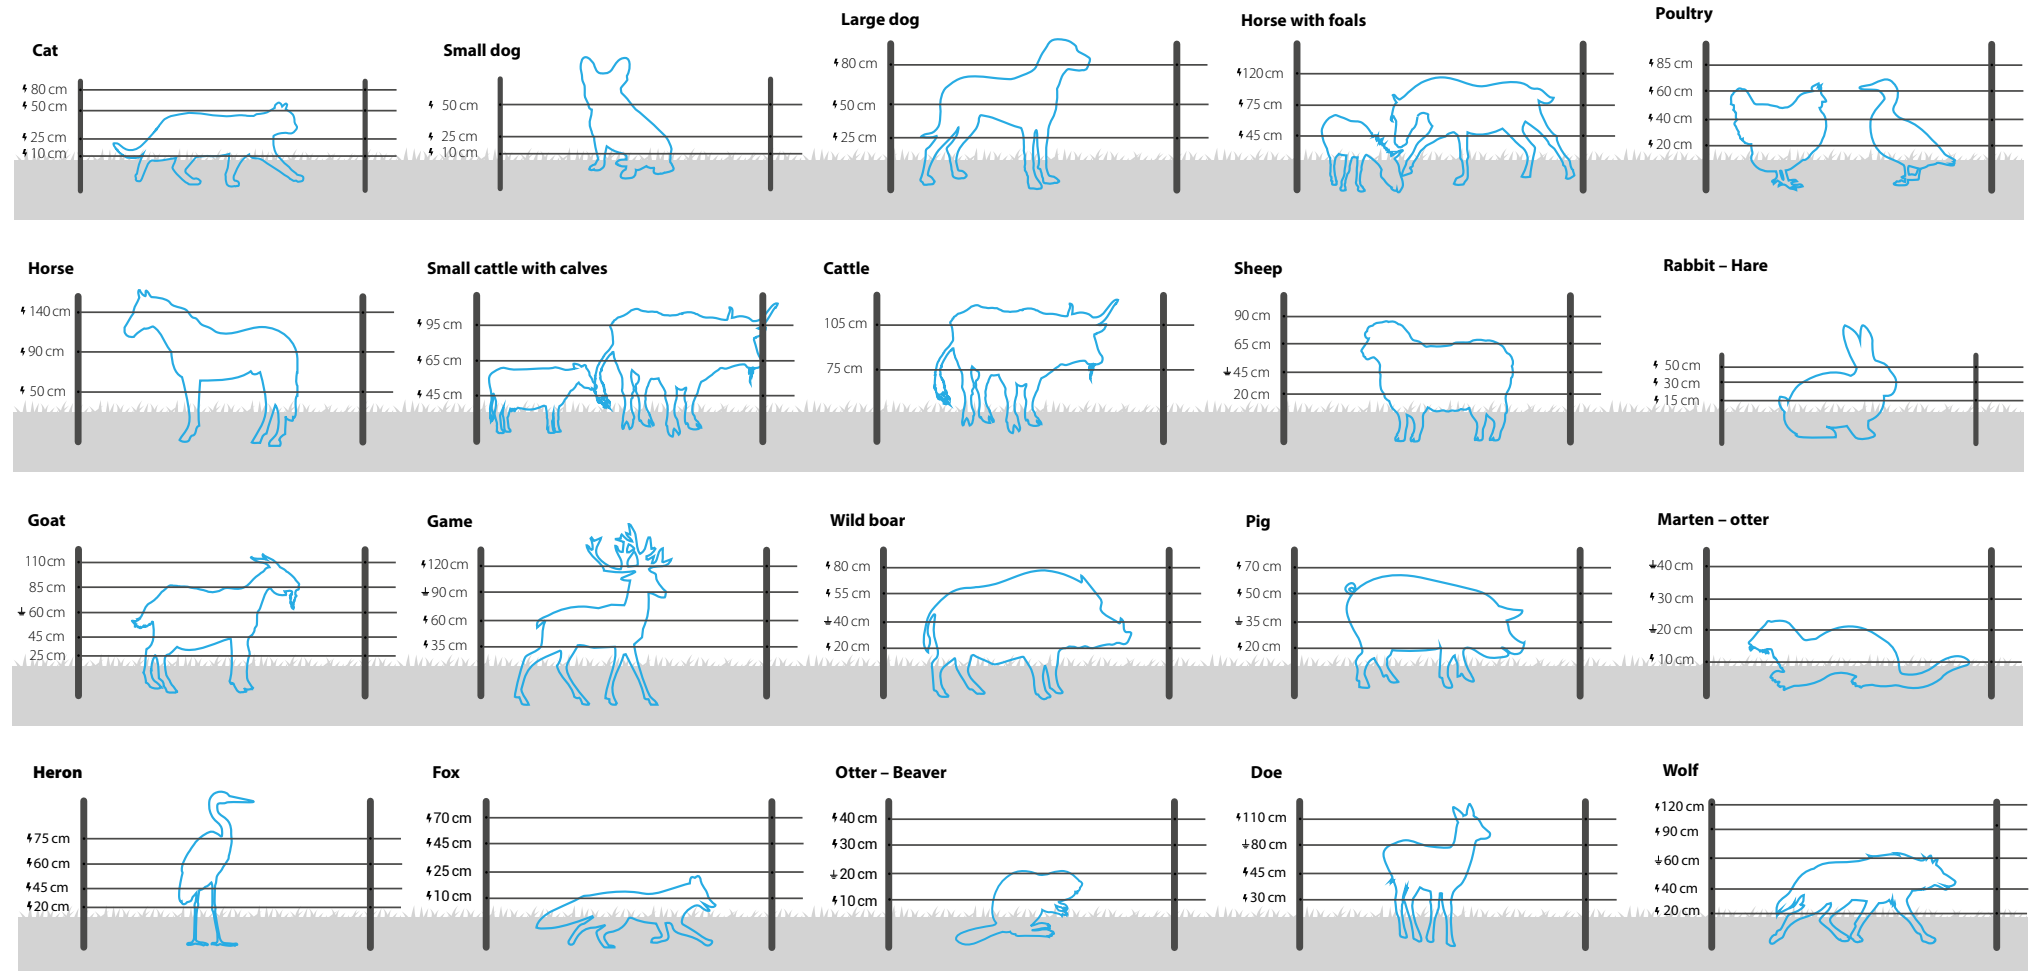

An electric fence is a system in which the correct installation of all its elements is necessary.

Even the fence is not omnipotent, even a very well executed installation may not always prevent animals from escaping, e.g. if they are startled.

Therefore it is necessary, in case where the fence is located near busy roads, to complete the electric fence with a fixed fence.

In poor earthing conditions or for less sensitive animals, we recommend installing a conductor that is connected to the earthing terminal at the same time.

When animal connects those opposite conductors, more intense impulse will occur.

How far apart should the posts be?

The following data recommend at what distance the posts should be for quality fastening of the wires in the fence.

POLYWIRES AND POLYROPES

6–8 m, depending on the weight to avoid hanging

POLYTAPES

3 m (for tape width 40 mm), 5 m (for width 20 mm) and 6–8 m (for width 10 mm)

WIRES

4 m (for diameter 6–8 mm), 6 m (for diameter 5–6 mm)

TERRAIN

When installing, always consider the course of the terrain.
Spread the posts so that the wires copy the ground as much as possible.

CONNECTORS

Never tie wires in knots — always use suitable connectors to ensure a quality connection and voltage flow in the fence.

CIRCUIT

The fence does not have to be a closed loop.
The circuit is closed by contact of the animal with the conductor.

DAILY INSPECTION

You should check your fence daily. With RF energizers and a central gateway, you get continuous control over the fence on a mobile phone or computer.

CONDUCTIVITY

Ensure a sufficiently strong output power, use low resistance conductors and have good earthing.

WARNING SIGNS

For safety reasons, you are required to mark the fence so that the marking is visible from each location.

How long can the fence be?

Depending on the length of the fence, an appropriate wire must be chosen. The power of the energizer and good conductor conductivity is the basis of good fence functionality.

Please remember that **the indicated installation length is given in optimal conditions**, e.g. that there is no vegetation.

If the fence is led in dense vegetation, then part of the energy is lead/lost into the ground, which affects the function of the fence and it is necessary to consider the conditions when choosing the power of the energizer.

fencee.cz

fenceeczech

- 1 Quality energizer fence with appropriate impulse strength.**
- 2 Keep the fence clean, without vegetation like grass, shrubs, and branches.**
Otherwise, there is a "withdrawal" of impulses into the ground, thereby reducing the efficiency of the fence and causing excessive battery consumption (especially for battery types).
- 3 Ensure perfect earthing. At least 1 m deep eventually having multiple in several places.**
It is necessary to choose the dampest place possible – the conductivity increases.
Use a stainless, well-conductive metal, secure a conductive connection among each of the earthing rods and its own source of impulses, including contacts on the device.
- 4 Use original connectors. Do not only tie wires into knots.**
In an emergency case, use at least a soft binding wire to carry the joint.
The wires of the fence must not be interrupted.
- 5 Use only a well-conductive material.**
Using conductors with a small resistance is necessary primarily for long fences (over 2 km of wire).
- 6 The wire and especially the earthing rod must not be rusty – rust insulates.**
- 7 Use polytapes or polyropes for fences with horses, not wire or polywire.**
Polytape can be seen better and does not cut like wire.
- 8 Use a good connection between the power supply and the fence.**
For the perfect connection, use a high-voltage cable.
- 9 While using battery energizers check the battery status regularly.**
- 10 Keep in mind that you must measure a minimum voltage of 2500 V in every place of the fencing.**
This value will overcome the resistance of animal skin.
For large and less sensitive animals, this value is 3000 V.

How does the electric fence work?

The electric fence consists of an electric energizer and a fence laid out by posts and conductors. The electric energizer supplies the fence line with current impulses. These impulses are characterized by high-voltage and very short duration (less than 0,3 ms.).

However, the electric shock is very unpleasant and animals learn to respect the fence quickly. The electric fence is not only a physical, but also a psychological obstacle.

Smart Farm fencee Cloud System is protected in the EU utility model.

PRODUCTS WITH RF TECHNOLOGY FOR REMOTE CONTROL AND MANAGEMENT OF FENCES

Complete solution of Smart Farm fencee Cloud

Smart Farm fencee Cloud

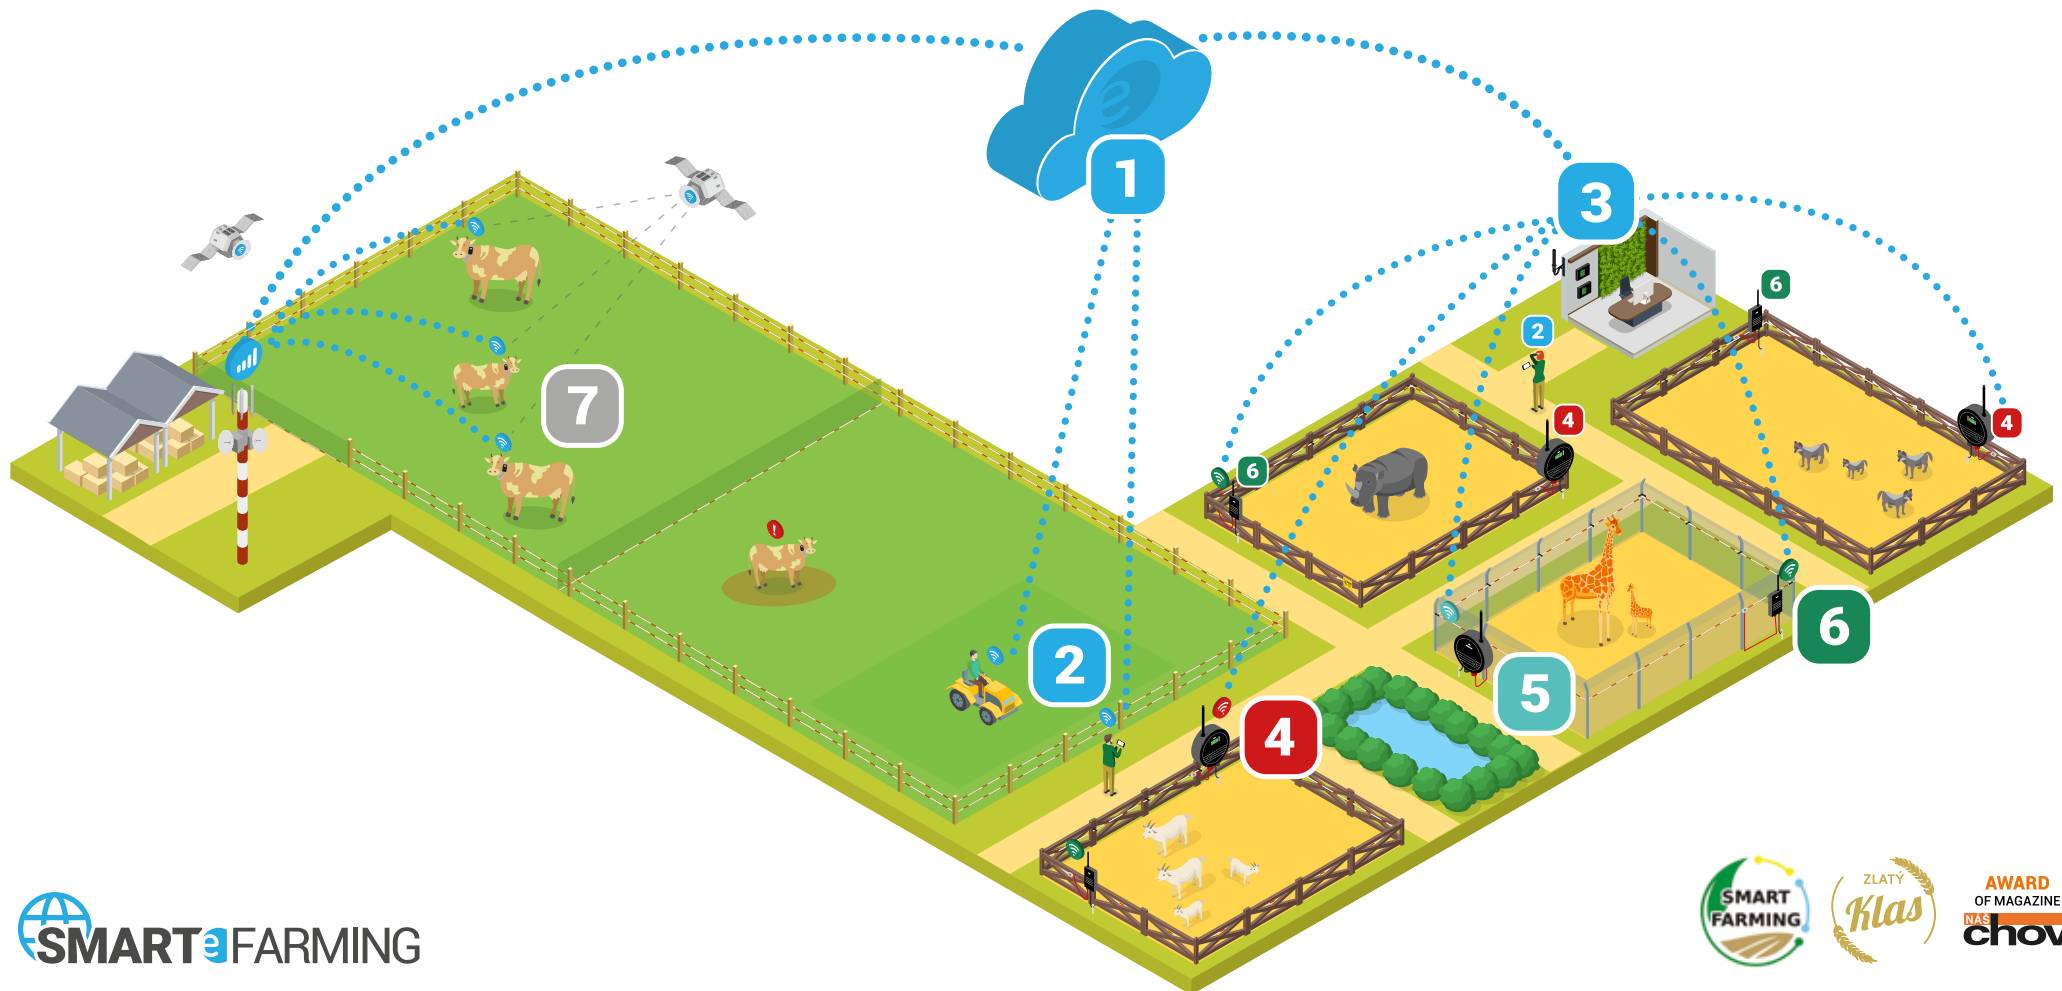

Control and monitor fences
from mobile phone or PC
with the **fencee Cloud** app.

How does a **fencee Cloud** work?

The central gateway **3** is connected to the Internet.

Cloud **1** collects data from all energizers and monitors. **4 5 6**

With the gateway, **3** it's easy to set up and control devices using fencee Cloud app **2** or web interface.

Individual elements

The individual elements of a Smart Farm fencee Cloud help you get a perfect overview of your electric fence.

1

fencee Cloud

The Cloud is a secure place on Internet through which communicates all paired devices. This allows you to share data with other users, check, set up, and control fences from virtually anywhere.

2

MOBILE APP fencee Cloud

Control the fences from your mobile or tablet via the app. For PC control, use the web interface.

VIRTUAL FENCING COLLAR fencee GPS F10

GPS collar for efficient livestock management with vital signs monitoring.

NEW
COMING
SOON

8

3

CENTRAL DEVICE FENCE WiFi GATEWAY GW100

Gateway is connected to the Internet and fencee Cloud. Using the mobile app, you can remotely control, set up and monitor all connected devices.

4

SMART ENERGIZER energy DUO RF EDX

Powerful RF energizer with high power up to 15 J. The device can be controlled from the app or you can use the EDX remote controller.

5

SMART ENERGIZER power DUO RF PDX

Lower range of RF energizers with power up to 7 J that can be controlled via the fencee Cloud mobile app or using PDX remote controller.

6

MONITORING DEVICE Monitor MX10

Real-time monitoring of fence voltage. If the voltage drops below the set limit, the monitor sends an alarm to the gateway, which sends notifications to your phone and email via the Cloud.

WI-FI ENERGIZER energy Smart DUO EDW

Strong combined Wi-Fi energizers with power up to 15 J and Cloud connection without the need of a central Gateway.

7

Main benefits

The biggest advantages of the fencee Cloud system.

Learn more about options of RF energizers remote control using the fencee Cloud application.

CURRENT INFORMATION

24/7 online info about all devices.

NO SIM CARD

No operation costs.

PHONE CONTROL

Control and monitor via mobile application.

COSTS SAVING

System cuts cost and save money during operation of electric fences.

TIME SAVING

Thanks to the remote control, you no longer have to check the fence by walking. Everything is managed via your phone or the web interface.

ALARM SIGNALIZATION

Problem notification immediately in your phone or e-mail.

NO LIMITATION

Application does not limit the number of devices.

CONTROL FROM ANYWHERE

Monitoring and control of the fence from anywhere, anytime.

RF TECHNOLOGY

The devices communicate with each other using free radio technology.

Fences constantly under control in the mobile application.

Maximum overview with the fencee Cloud application

Get an overview of all important values and keep your fences under control whenever you need.

WELL-ARRANGED GRAPHS

Graphical image of measured values over the last 7 days.

LIST OF DEVICES

Well-arranged lists of all connected devices sorted by superior gateways.

Name	Fence
G1 Cow pasture 45A970E7000005 - EDK150	8.9 kV
G2 Sheep paddock 4E79006A000025 - PDK30	12.0 kV
G3 Horse fence 5FA970770000 - EDK150	8.6 kV
G4 Horse paddock 2AA05015H021 - PDK30	3.9 kV
G4_MA Monitor at stable 58EA30C9000015 - MX10	4.0 kV
G4_MB Monitor by the river 5FE270C8000005 - MX10	3.9 kV

ONLINE ALARMS

In case of an exceptional breakdown situation – an immediate alarm to your phone or e-mail.

MONITOR VALUES

Values to be set up and monitored through the fencee Cloud application.

ACCESS CONTROL

Give individual users control and setup rights of electric fences.

Clearly, all in one place

Values which you can set up and monitor remotely, clearly in one place.

Voltage

Voltage measurement in the fencing.

Power output

Based on the current impedance of the fencing, energizer's adjusts power output. The energizer output is increased based on the increased impedance.

Mode

It is possible to switch between energizer outputs 100 % or 50 %. Decreased output may be appropriate for example, in relation to sensitive animals or to save the battery.

Status

Display the energizer status. There are several statuses available:

ON – switched on, working

STANDBY – switched off (i.e. in standby mode)
can be switched on remotely

OFF – switched off, cannot be switched on remotely

Battery State

Monitor the state of batteries in all connected devices.

Alarm

User-set voltage threshold. Activation of the alarm if the voltage drops below the limit.

Impedance

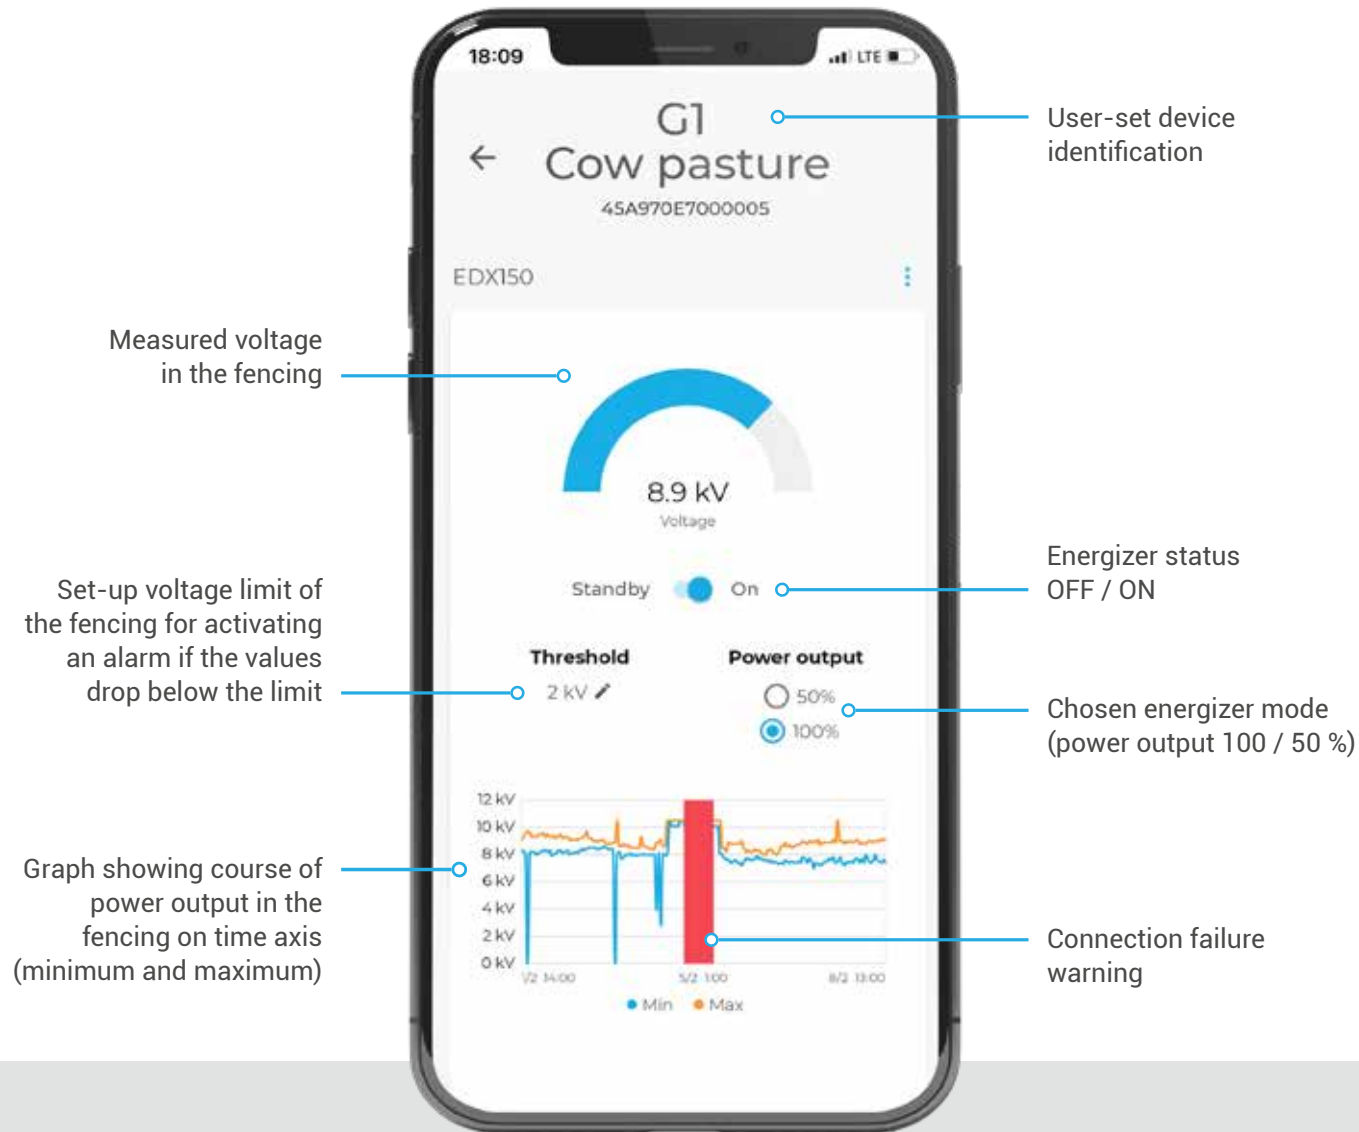

The fencee energy DUO RF EDX energizer measures the impedance of the fencing and adjusts the output based on measured values. The impedance of the fencing changes, in particular, due to the vegetation growing through the fencing or due to the deteriorating characteristics of the conductor.

Earthing Quality

The energy DUO RF EDX energizer evaluates the earthing quality with controlling earthing electrode.

WELL-ARRANGED GRAPHS

App fencee Cloud

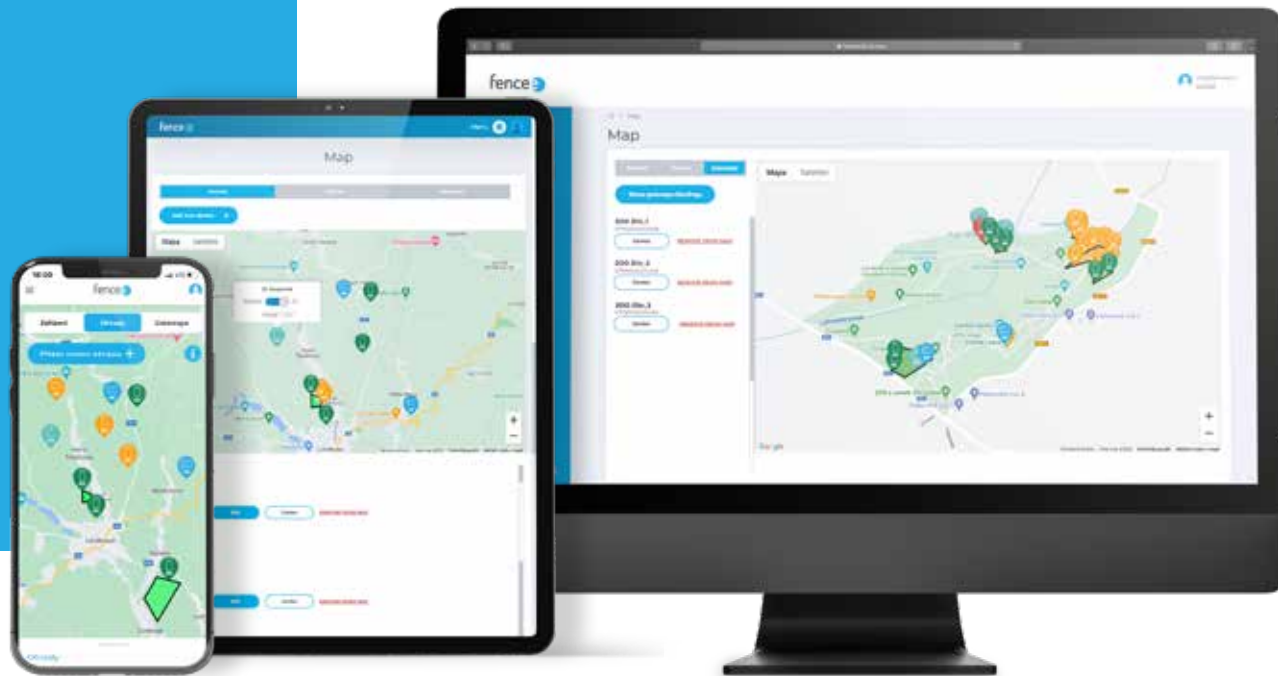

Free to download

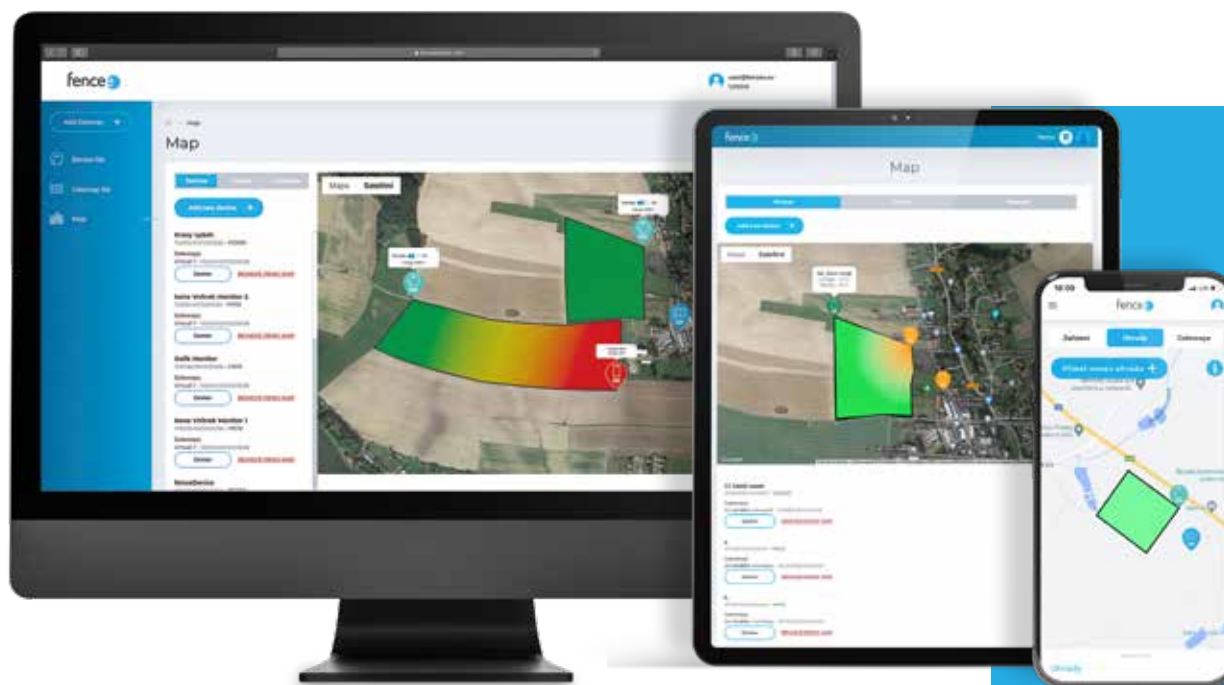

MAP BASE

For easy orientation, you can deploy devices in particular locations on the map. From the map, you can easily click on the respective location to get to the relevant device.

VIRTUAL FENCE

Using a virtual fence, you can easily draw fences into the map. In case of an alarm, you can immediately see colour scheme indicating origin of the problem.

24/7 fence supervision for real peace of mind

With the fencee Cloud system, zoo staff gain a real-time overview of all relevant values on electric fences.

More information about the Smart Farm System in Zoo Zlín can be found on page 56.

“The Smart Farm system is very helpful and has fulfilled all the expectations we had. Most of all we appreciate the online monitoring and the continuous checking where we can see the status of each electric fence and last but not least, saving time for the breeders in finding faults in a fence or during routine inspections.”

Vlastimil Mizera
Manager of electric fences at Zoo Zlín

fencee **energy DUO RF EDX**

**EARTHING
MEASUREMENT**

Display shows different information on several screens, easily scroll between them using the control buttons.

**SETTINGS
button**

**CONFIRMATION
button**

Two outputs for full flexibility

Yellow terminal is used to connect fence with permanently reduced output energy. This terminal is used to connect fence for younger and smaller animals (foals, calves) running a weaker, approximately half-strength voltage. It is also connected separately on bottom wire of larger fence where the growth of dense vegetation is expected. This output is technologically treated against loss, and there is no leakage of voltage to the earth as with typical connections; thus the energizer power is not reduced. The other wires connected to the red terminal are powered separately and at full voltage.

1 Separate connection to the bottom wire where the growth of dense vegetation is expected.

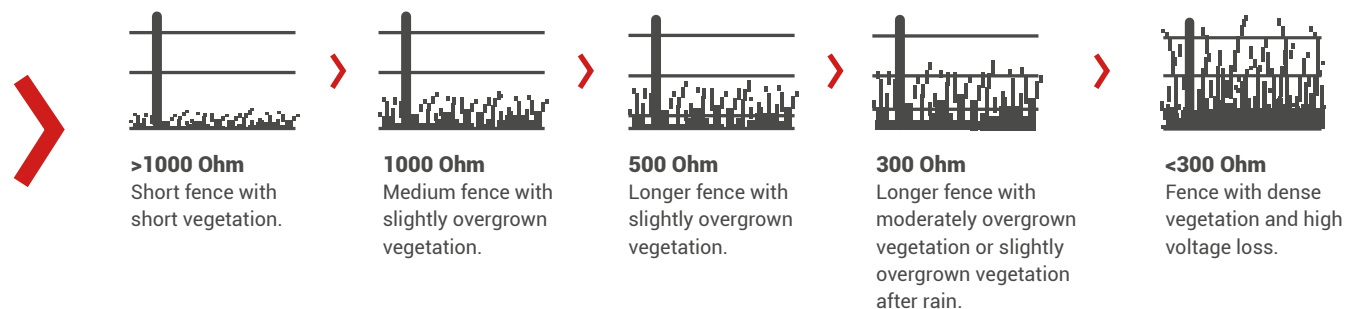

2 Fence connection for smaller and younger animals.

-  Earthing connection
-  Fence connection with reduced power
-  Fence connection with full voltage

INDICATION OF FENCE LOADING SCREEN:

DISPLAY ICONS INDICATING THE FENCE LOADING:

fencee energy DUO RF EDX

You can control the energizers using a mobile phone or PC.

Large graphic display with control buttons for easy operation.

LED lights and BARGRAF for displaying fence status and fault indication.

Time delay for power increase. Complies with special standards for energizers with power over 5 J.

Yellow terminal for reduced power. Suitable for smaller fences or fences with young animals.

Terminal for earthing quality measurement.

Optional regulation between high and low power.

You can use the remote controller as an accessory.

SAVING

“In strong winds, it happens to us that a branch or a whole tree falls on the wires and causes a short circuit in the fence. Thanks to the new smart fence system, we know what is happening and can react immediately.”

Vlastimil Petrlák | Owner of the farm

Smart Farm fencee Cloud with the Association of Sheep and Goat Breeders

“With the app and the entire Smart Farm system we have a 24-hour-a-day overview of energizers outputs and fence conditions. This allows us to react immediately to any changes and know exactly where a problem occurs. That's where I see a big benefit for the breeders.”

Ing. Jiří Huml | Director of the Association

Monitor MX10

24/7 REMOTE MONITORING OF FENCE VOLTAGE

It monitors key fence sections and immediately informs about the voltage drop.
Measures the fence voltage and sends data to the gateway.

- 📶 Possibility for connecting more monitors to one fence – to divide single fence into more zones.
- 📶 Battery life time 1 year / the whole season.

Monitor MX10	
LED INDICATION	✓
EXTERNAL CONNECTOR SMA	✓
SOUND SIGNAL	✓
MAGNETIC SWITCH MODE	✓
RANGE WITH BASIC ANTENNA	up to 10 km
RANGE WITH EXTERNAL ANTENNA	up to 30 km
TRANSMISSION FREQUENCY	869,525 MHz
TRANSMITTING POWER	+22 dBm
BATTERY	2 × C LR14
DIMENSION	78 × 144 × 42 mm
WEIGHT	325 g

DETAIL SCREEN

Display the paired monitor and all available information about a specific monitor.

- 1 Device type
- 2 Time since last data transfer
- 3 Monitor battery voltage status [%]
- 4 Current set value for alarm activation [kV]
- 5 Value of the voltage on fence [kV]
- 6 Signal level between monitor and gateway

How does it work?

- 1** The monitor recognizes a drop in the fence voltage and sends information to the central gateway.

- 2** The gateway sends an alarm within a few seconds.

- 3** You can switch off the power supply on fence conveniently via the fencee Cloud application and eliminate a problem.

- 4** Once the problem is eliminated, you can switch on the energizer using the app and check the fence voltage on your mobile phone.

Learn more about the
Monitor MX10

Monitor MX10 installation options

STANDARD INSTALLATION

Fence divided into sections. If the voltage of a monitor drops, the section and location of the problem can be easily identified.

FOR FENCE ENTRANCES AND IN PROBLEMATIC LOCATIONS – SECTIONS

Installation for an easy identification of the fence with a non-functional energizer or the location where problems may occur frequently, e.g. by the forest, by the water, in locations with dense vegetation.

FOR FENCE ENTRANCES

Installation for quick identification of the fence with a non-functional energizer.

CONTROL INSTALLATION FOR CLOSING A GATE

The monitor can also be installed on the gate insulator eye. If the handle hook is disconnected and the eye lacks voltage, the monitor evaluates the situation and sends an alarm to the gateway.

TIP

Put the monitor in the key sections where voltage needs to be checked (fence entrance) or where frequent problems, for example, with vegetation, by the forest, by the water, or when disconnected fence gate, can be expected.

Smart Farm fencee Cloud system in Zoo Zlín

A case study of the use and benefits of Smart Farm fencee in Zlín Zoo.

Results speak for themselves

After the installation of the Smart Farm system in Zoo Zlín, the work of technicians and caretakers has become more efficient. Last but not least, the employees have gained a complete overview of the electric fences and are immediately informed on their smartphones if a problem occurs.

Secured enclosures and animals

Take a look at the layout of the electric fences, which are secured by the Smart Farm system fencee Cloud.

What says about the system

Ing. Roman Horský | director of Zoo Zlín 🇨🇪

“The new smart system fencee Cloud will allow us to have electric fences under control around the clock and will also make it easier detecting the specific section of failure. A truly unique system in every aspect.”

SAVING

“Controlling the fence with your mobile phone is a great feature. You only realise when you try it yourself. With one click, I can turn off the power whenever I want. Before this, junior had to help with this and always ran to turn off the power with a button.”

Eman Hanyk | Ranch Coldriver

fencee mini DUO MD

A new series of electric fence energizers fencee **mini DUO MD** is universally applicable. Output power 0,3 – 1 J with a possible installation length up to 9 km.

WIRING TIPS **PLUS-MINUS**

That is wiring without earthing, when both wires are lined simultaneously, and the impulse occurs when they are connected. This direct path causes the electrical impulse to be particularly intense, but also more sensitive to the animal because the electricity flows through only a small part of the body.

The energizer suitable for the **PLUS-MINUS** wiring is fencee **mini M02**.

**Modern and practical
solutions for your needs.**

Accessories

We offer a wide range of accessories for reliable functioning of your fencing and achieving the maximum performance of your energizer.

We make products that have undergone our testing process and we guarantee their functionality and reliability.

Our range of accessories provides quality products from reputable suppliers tested by us.

Important notice for functionality!

1. If you choose an unsuitable wire.
2. You don't ensure proper earthing.
3. You don't ensure proper insulation.

Your fencing will not be able to operate at maximum performance!

More information about the products? To search, use Art.Nr.

Automatic Chicken Coop Door

The automatic closing and opening of the coop is a practical feature that will save you a lot of time and trouble. The advantage of the hen coop door is that you can leave the house without worrying and the poultry will always be locked in the safety of the coop at the right time, even in your absence, and thus protected from predators.

✔ **Protection of poultry and eggs from fox, marten, weasel, birds of prey and vipers.**

Door with adapter 230 V
Art.Nr. 8226

Door with battery AA
Art.Nr. 8225

**Door with adapter 230 V
and solar panel 2W**
Art.Nr. 8227

Optional modes

Timer – opens/closes the door at the time you set.

Sensor – opens/closes the door according to the ambient light (brightness).

Sensor + timer – when any mode reaches the set value, the door will open/close automatically.
